

GOGGLES £70 - £140

Salomon only launch new product lines if they believe they can offer significant innovation and skier benefits. The all new goggle range offers three stand alone patents:

- Salomon's XTEND frame concept - a larger lens, 20% more vision and slimline frame gives greater peripheral vision than other goggle designs.
- The Thermo Control System consists of scoop shaped air vents which create low pressure zones to pull moisture away from the lens and face to eliminate fogging.
- Custom Frame is a very flexible construction that fits to the face and adapts to any face shape for improved all day comfort.

Salomon's Thermal Control System (TCS) brings all round comfort to helmet wearers. In the early season, stay warm with the TCS lining and TCS exhaust ducts to control the temperature. During warm conditions and spring skiing, open the TCS ventilation and force even more air into the helmet for maximum cooling. Available on the Allium 08 Custom Air Helmet. £135

ALIUUM 10 CUSTOM AIR HELMET

BACK PROTECTION

FLEXCELL is a double density advanced elastomer, soft and flexible foam which bends as the body moves, but protects on impact. The FLEXCELL protection fits like a second skin garment with adjustable chest and waist link system for the perfect fit and peace of mind. £125.
